

Biodiversity Of Rain Forests

Biodiversity Of Rain Forests

Biodiversity -- short for biological diversity -- is the the number and types of organisms in an habitat, ecosystem, region or environment. It can refer to genetic, species, or habitat variation at any scale. Leaf-tailed gecko in the rainforest of Madagascar.

Rainforest Diversity - Rainforests: facts, figures, news ...

Tropical rainforests support higher land area units (acres or hectares) of biodiversity when compared to temperate or arid forest ecosystems. There are some educated guesses by experts that tropical rainforests on our planet contain about 50% of the world's terrestrial plant and animal species. The...

Tropical Rainforests and Biodiversity - ThoughtCo

CANOPY STRUCTURE AND BIODIVERSITY IN THE RAINFOREST. The canopy system characteristic of tropical rainforests further increases diversity by creating new niches in the form of new sources of food, new shelters, new hiding places, and new areas for interaction with other species. In fact, it is estimated that 70-90 percent of life in the rainforest is found in the trees.

Biodiversity in rainforests

In general, biodiversity globally is high in the Tropical World of the humid tropics (most especially in tropical rainforests where more than half of all species are found) and in the extremely ...

What is a cause of the biodiversity of rainforests?

Threats to the biodiversity: The amazon rainforest covers a large spread of land, much of which is being shared with humans. And as one might imagine, when it comes to sharing land, humans usually win, thus, there are quite a few threats to the amazonian rainforest.

Biodiversity - The Amazon Rainforest

Other species - epiphytes and lianas, are comparably fewer in number than in other tropical regions. Within Africa, west-central Africa n forests have the highest biodiversity Malesia (the region of Southeast Asia including Malaysia and the western part of Indonesia),...

B. How much biodiversity is found in tropical rainforests ...

Tropical rainforests and coral reefs are among the planet's richest and most complex ecosystems. The areas with the greatest diversity of plant life are the tropical Andes and southeastern Asia. The Amazon basin, Madagascar and parts of southern and central Africa also compare favorably.

Questions and answers about biodiversity - Rainforest Rescue

With rapid deforestation, it has been estimated that 20% of the Amazon rain forest has disappeared in the last 50 years, which has already led to detrimental effects to biodiversity and the increase of climate change. The Amazon is one of the most biodiverse ecosystems in the world.

Protecting Biodiversity in the Amazon Rain Forest ...

Forest Biodiversity. Forests are biologically diverse systems, representing some of the richest biological areas on Earth. They offer a variety of habitats for plants, animals and micro-organisms. However, forest biodiversity is increasingly threatened as a result of deforestation, fragmentation, climate change and other stressors. More ».

Forest Biodiversity - CBD

Tropical rainforests are centers of biodiversity, holding an estimated half of the world's plants and animals, many of which have yet to be catalogued (some scientists estimate that it's two ...

Rainforest and Amazon facts and information

The Amazon Basin is home to half of the world's tropical forests. These forests are home to an incredible diversity of plant and animal life. From the birds and bees of the forest canopy to the sloths and snakes beneath, the Amazon has a dazzling array of species . . . some of which remain

undiscovered.

Biodiversity of the Amazon | National Geographic Society

The CBD addresses forests directly through the expanded programme of work on forest biological diversity (annex to decision VI/22), adopted in 2002 by the Conference of the Parties at its sixth meeting. The forest work programme constitutes a broad set of goals, objectives and activities aimed at the conservation of forest biodiversity, the ...

About Forest Biodiversity - CBD Home

The concept of biological diversity, or biodiversity, encompasses the variety of existing life forms, the ecological roles they perform, and the genetic diversity they contain. In forests, this diversity allows species to adapt continuously to changing environmental conditions and to contribute to the functioning of the ecosystem. From a human perspective, forest biodiversity also maintains ...

4. What is the biological diversity of the world's forests?

Rainforests are the world's treasure houses of biodiversity, but all rainforests are not the same. Biodiversity may be more evenly distributed in some forests than in others and, therefore, may ...

Rainforest Biodiversity Shows Differing Patterns ...

Biodiversity is higher in a tropical rainforest than an arctic tundra. High precipitation levels in rainforest makes the soil poor in nutrients but the plants in rain forests adapted to the ...

What are some reasons tropical rain forests have high ...

New localities lead to new biodiversity. Tolerance ranges of species. Climate. Tropical rainforest biomes. This is the currently selected item. Practice: Biodiversity. Science · Biology · Ecology · Biogeography. Tropical rainforest biomes. Neste artigo são apresentadas as principais características das florestas tropicais, abordando o ...

Tropical rainforest biomes (article) | Khan Academy

Rainforests. There are two main types of rainforest: tropical and temperate. These are distinguished by their location; a tropical rainforest is located between the Tropic of Cancer and the Tropic of Capricorn, temperate rainforests are usually coastal and slightly higher or lower than the two Tropics. Despite the difference in location,...

Biodiversity and Tropical Rainforests - Home

Tropical rainforests exhibit high levels of biodiversity. Around 40% to 75% of all biotic species are indigenous to the rainforests. Rainforests are home to half of all the living animal and plant species on the planet. Two-thirds of all flowering plants can be found in rainforests.

Tropical rainforest - Wikipedia

Tropical forests are home to half the Earth's species, and their trees are an immense standing reservoir of carbon. Deforestation will have increasingly serious consequences for biodiversity, humans, and climate.

Tropical Deforestation - NASA Earth Observatory

Forest biodiversity. Forests are the most diverse ecosystems on land, because they hold the vast majority of the world's terrestrial species. Some rain forests are among the oldest ecosystems on Earth. Timber, pulpwood, firewood, fodder, meat, cash crops, fish and medicinal plants from the forest provide livelihoods for hundreds of millions of ...
