The African Butterfly Peacock *Aulonocara jacobfreibergi* is one of the most colorful of the Peacock cichlids. It is also one of the most variable, with natural color strains that can be very different between populations. These cichlids are some of the largest members of the Peacock family, though size too depends on the location they are from.

The goldeneye phlox has five petals bright pink in color. It is a common wildflower with a long blooming period. The wildflowers grow upright with an explosive bunch of petals and also come in shades of red, blue, and purple.

Texas Hill Country Wildflower Identification Guide

Asclepias tuberosa, the butterfly weed, is a species of milkweed native to eastern North America. It is commonly known as butterfly weed because of the butterflies that are attracted to the plant by its color and its copious production of nectar. It is also the larval food plant of the queen and monarch butterflies. Hummingbirds, bees and other insects are also attracted.
