I would like to run the simple shell command `echo 1 > /proc/sys/kernel/sysrq` at each boot, to enable the sysrq keys. When in boot should this be done, and where should I put a script to do it?

linux - How can I run a command after boot? - Super User

`$ at now + 1 minutes at> echo "Hello world" > test.txt at> job 4 at Tue Dec 19 11:29:00 2017` To exit the at prompt we should press the CTRL+d key combination. At this point we will be presented with a summary of the scheduled task, which will show us the job id (4 in this case) and the date at which it will be executed. Just as an example, we entered a trivial command to show how at works.

Understanding Theory X and Theory Y. Theory X and Theory Y were first explained by McGregor in his book, "The Human Side of Enterprise," and they refer to two styles of management - authoritarian (Theory X) and participative (Theory Y). If you believe that your team members dislike their work and have little motivation, then, according to McGregor, you'll likely use an authoritarian style of ...
