The common raven (Corvus corax), also known as the northern raven, is a large all-black passerine bird. Found across the Northern Hemisphere, it is the most widely distributed of all corvids. There are at least eight subspecies with little variation in appearance, although recent research has demonstrated significant genetic differences among populations from various regions.

General Description. Wolves are members of the family Canidae. Early taxonomists recognized about 24 New World and eight Old World subspecies of Canis lupus, with four subspecies thought to occur in Alaska. Recent studies of skull characteristics, body size, and color suggest that differences

are slight with considerable overlap in the characteristics of wolves from various areas.

The Wolf Pack. Wolves belong to family groups called packs, they usually consist of eight to fifteen-members. The rare exception is what is popularly know as a "lone wolf", this wolf would most likely be the lowest member of a pack (the omega) that was driven out of the pack, if it is lucky, the "lone wolf" may find a mate and start a new pack.
